FORKLIFT MOTORS

FAST AND EASY DOWNTIME SOLUTIONS

When your forklift breaks down, your whole facility stops. Every minute of downtime burns cash, but replacing your aging electric forklift isn't in the budget. What do you do?

MidCo Power is here to help. We can repower your existing electric forklift overnight and extend its life for a fraction of the replacement cost.

**Downtime is
expensive.
We fix it fast.**

GET MORE OUT OF YOUR AGING ELECTRIC FORKLIFT

Electric forklift ownership has many benefits, but aging models have typical challenges. Older batteries and chargers lead to shorter run times, while tired motors increase the risk of unplanned downtime. Every lost hour spent charging or repairing your forklift is lost revenue. That hurts, but we can help.

MidCo Power (originally B&B Electric Motors) has been restoring and repowering electric forklift motors since 1985. We understand that when your forklift goes down, you need it back up and running yesterday. Our decades of experience rebuilding motors, repairing batteries, and fixing chargers mean we have the know-how and the infrastructure to solve your downtime within hours.

WHAT WE DO

WE OFFER THREE CORE SERVICES TO GET YOUR ELECTRIC FORKLIFT UP AND RUNNING FAST.

In the last century, the world gradually converted from gas to electric lights. Today, we're experiencing the same transition, from internal combustion to electric forklifts.

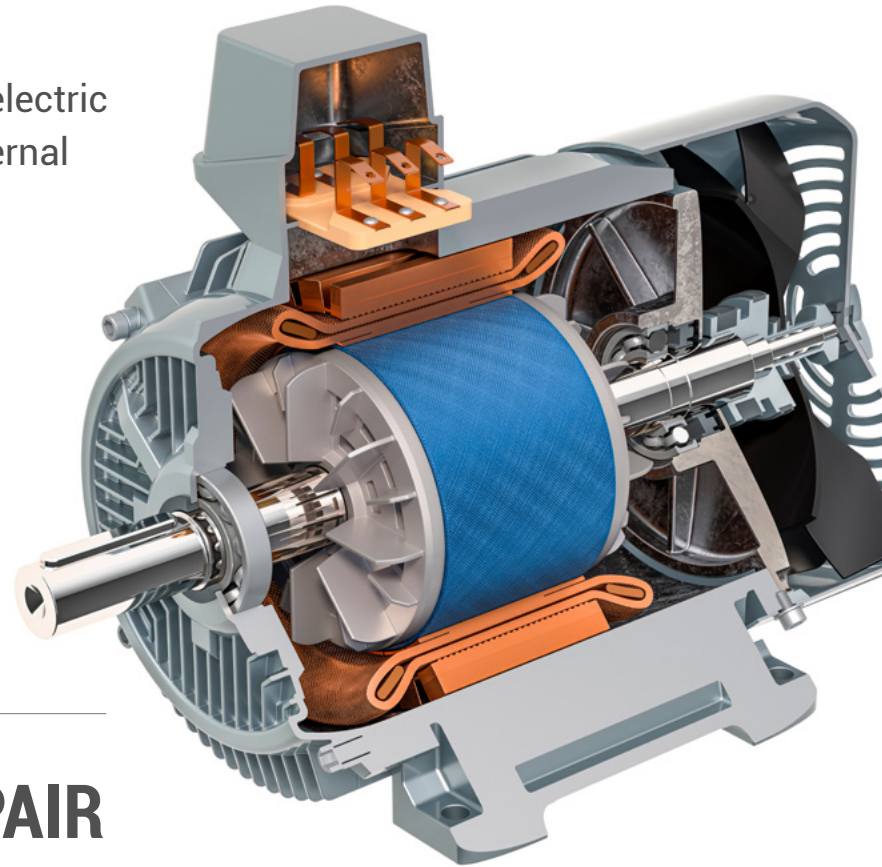

ELECTRIC MOTOR REBUILD

BATTERY TESTING & REPAIR

BATTERY CHARGER TESTING & REPAIR

RESTORING POWER TO ELECTRIC MOTORS SINCE 1985

ELECTRIC MOTOR REBUILD

The motor is the most common cause of terminal breakdown with aging electric forklifts. Some sales reps might tell you that means it's time for a replacement, while some technicians will say you need to buy a new motor. However, we have a better solution. Our team can extend the life of your favorite workhorse in 3 easy steps.

1

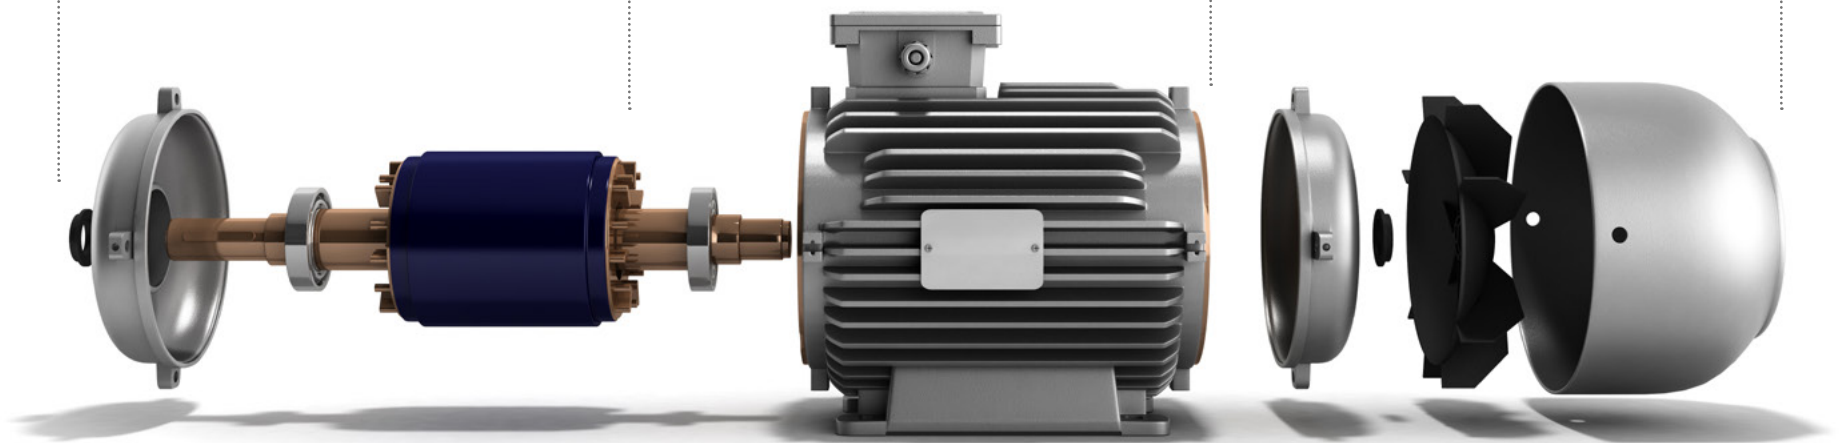

A forklift technician determines that your motor has gone bad, and you contact us.

2

We take the faulty core and either replace it with a like-new motor or rebuild it.

3

You install the replacement core in your forklift and then send your forklift back to work.

BETTER VALUE, FASTER SERVICE

Electric motor rebuilds are so much more than a band aid. Repowered motors are the best solution to keep your aging forklift working for years to come.

Speed. If we have a like-new motor in stock, we'll ship it to you within hours. If not, your existing motor can be rebuilt to like-new condition within 72 hours.

Lower Cost. Rebuilt motors cost up to 70% less than new motors with no reduction in performance.

Extended Life. Repowered cores can double the usable life of your electric forklift.

Hassle-Free. If you know your existing motor's make and part number, we can send you a replacement with just a phone call. No consultation needed.

Transparent Pricing. Motor rebuilds are priced at a flat fee with no hidden costs.

Highest Quality. All our rebuilt motors are like-new or better-than-new quality.

Brand Agnostic. We rebuilt motors for any brand.

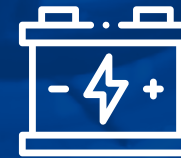

Nationwide Service. We can ship rebuilt cores anywhere in the country.

We rebuild any make and model—not just the big-name brands. With options no one else has, we can repower your motor no matter where you purchased it.

BATTERY TESTING AND REPAIR

The next most common cause of electric forklift downtime is reduced battery life. As batteries age, they begin to hold less and less charge. Yet, in most cases, you don't need to replace your battery. We can get it back up and running in no time. Here's how it works.

Our rebuilt products are as good or better than new. A warranty backs all our work to ensure you always have peace of mind.

1

You send us your underperforming forklift battery.

2

We recondition the battery to like-new performance.

3

You put your repaired battery back into service and enjoy top-quality results.

MORE POWER AT THE LOWEST PRICE

New batteries are an expensive investment. Do not pay more when we can get your existing battery up and running faster for less.

Speed

We understand that downtime is expensive. So, our technicians work fast to get your battery back to work in no time.

Lower Price

Reconditioning your battery costs less than half of what you would pay for a new battery.

Transparent Pricing

We charge a flat rate for battery testing, regardless of the model, and battery repair is billed hourly.

Quality Guaranteed

All work is completed by certified technicians backed by a warranty and our 35-year history of repairing electric forklifts.

BATTERY CHARGER TESTING AND REPAIR

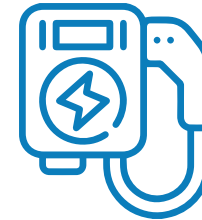

When the problem isn't the motor or the battery, often the charger is to blame. Our technicians fix your chargers with one call. No headache. No stress. No hassle.

Your team identifies a charger that needs to be fixed and calls our field repair team.

A MidCo Power technician arrives on-site and repairs the charger to like-new condition.

Your charger goes back to work powering your electric forklift fleet

**We promise the most transparent communication on the market.
You can always talk to a human to ensure your needs are met the first time every time.**

ON-SITE SOLUTIONS ON DEMAND

Our team of expert technicians focuses on first-call solutions so that charger downtime doesn't put your facility on hold.

Speed

We understand that downtime is expensive. So, our technicians work fast to get your battery back to work in no time.

Transparent Pricing

We charge a flat rate for battery testing, regardless of the model, and battery repair is billed hourly.

Quality Guaranteed

Like our battery repair, all work is completed by certified technicians backed by a warranty and our 35-year history repowering electric forklifts.

One Call Solution

Our specialized team prioritizes your power issues so that repairs are handled quickly, efficiently, and at cost-effective pricing.

REDUCE, REUSE, REPOWER

MidCo Power is all about the win/win. Our forklift motor rebuilt solutions create a circular economy that benefits every stakeholder: You, us, and the environment.

Like everything we do, the process is simple but effective. It starts with your faulty motor. You turn it over to us, and in return, we give you a core credit toward your like-new replacement. After we ship your replacement motor, we will rebuild your old core. That motor is then used to replace another forklift's faulty core. Then we rebuilt that core, and the process continues so that repowered motors return to service again and again.

THE ENVIRONMENT IS ONE OF OUR BIGGEST STAKEHOLDERS

By repowering existing forklift motors, fewer new cores have to be produced. This virtuous cycle has substantial environmental benefits that affect all of Washington State.

Repowered motors help you hit your conservation goals by reducing your company's waste.

By keeping more electric forklifts running longer, we help reduce greenhouse gas emissions by

61%

More rebuilds mean fewer motors going in the trash. This helps drop landfill space used by

85%

Manufacturing new motors is an energy-intensive process, but rebuilds are not. Repowered motors help reduce industrial energy consumption by **85%**

HASSLE-FREE SINCE 1985

Midco Power also saves you a lot of headaches and hassle. When you choose to repower your forklift, you extend its life. This means you don't need to retrain your staff on new equipment, and you don't have to pay to dispose of your retired forklift or battery. Additionally, our solutions can double the lifespan of many forklifts, batteries, and chargers. This is one more way to reduce your company's carbon footprint without any drop in productivity.

We're a one-call solution that breathes new life into every aspect of your forklift's power.

EARN MORE FROM YOUR ELECTRIC FORKLIFT FLEET

The **Washington Clean Fuel Act** offers clean fuel credits for facilities using electric forklifts. These credits can be sold to other companies that need to offset their own carbon footprint. MidCo Power makes registering your forklifts easy, so you can start earning money from your clean fuel credits immediately.
